

1. The exterior of the Toilet Support Kit is made of Acetal which is a corrosion resistant polymer that will not crack or chip.
2. The footprint of the Toilet Support Kit on the floor is the 2-inch shaft diameter.
3. Typical toilets have a weight capacity of 350 pounds. With the TSK714 installed, the weight capacity will be 1,000 pounds.
4. Attached to the bottom of the wall mounted toilet with silicon adhesive.
5. Adjusting the bottom half of the shaft (the blue section of the diagram) will allow the jack to fit under a wall mounted toilet with 7 to 14 inches of clearance.
