ELIMINATING PATIENT LIFTING IS REQUIRED IN HOSPITALS

CAN YOU LIFT SAFELY?

HB 1672 requires hospitals to create and maintain safe working environments. Once an approach is decided upon, the hospital must implement its program with lift teams, specialty equipment, and/or work modifications.

The good news is that the State of Washington allows 100% of the cost of no lift equipment to be applied as credit against the B&O tax. Immediately

The Millennium Litem Product can maneuver in a room and safely lift a 700 pound patient from bed, stretcher, chair, or floor. The Litem's advantage is that the lift arm swivels instead of moving the entire lift with the patient in the air. It is the only lift that can do so.

Eliminating injuries is no longer a slogan.

Safer and better is our future.
